

Spectacle Sound Kit

KIT-14172 RoHS

Description: The Spectacle Sound Kit makes it easy to incorporate sounds, tunes and other audio ideas into your next project and to activate them at the push of a button! With the Sound Kit you gain the ability to utilize the OGG Vorbis high-compression audio format for your next or current button-controlled sound-playback project. Inside each Spectacle Sound Kit you will find all the boards required to create an audio project (the Spectacle Director, Audio, and Button Boards), as well as all the accessories needed to get you hooked up and heard!

We have written an in-depth [User's Guide](#) and [Sound Kit Hookup Guide](#) to help direct you through each step of setting up this and any kit in the Spectacle product line. You will be surprised by how easy and quick it is to make yourself into a Spectacle!

Spectacle is a product ecosystem centered around a simple idea: creative people shouldn't have to learn new skills to use electronics in their projects. You've spent years developing the skills you use, and SparkFun wants to recognize that and help you expand your creations to include electronics without requiring you to spend years learning about electronics and programming.

Note: The “Out” jack on the Spectacle Audio Board is not for audio signals. Plugging an audio device into one of the Spectacle jacks could cause damage to the audio device. The audio jack on the Audio Board produces output suitable for amplification only. It is not suited to headphones or unpowered speakers.
